

# ARGUS ASOC FLEET PROTECTION

Gain full visibility into your fleet post-production to detect attacks in real-time, understand the full attack story, and drive immediate mitigation

## PROBLEM

### TOO MANY BLINDSPOTS

CISOs know that in order to secure their OEM fleet, having complete visibility is crucial. But with the rise of vehicle connectivity, unique automotive protocols, and emerging international regulations, gaining complete visibility on a global scale is harder to achieve. Without domain expertise, defined processes, and technologies tailored to the automotive industry, OEMs cannot see existing threats targeting their vehicles, or anticipate potential attacks planned for the near future.

## SOLUTION

### GAIN FULL VISIBILITY

Built from the ground up for automotive, Argus Fleet Protection gives OEM ASOC teams full visibility into their fleet post-production. Powered by three core capabilities, this solution enables security analysts to identify real-time attacks using threat hunting engines, uncover incidents with enriched data, and analyze the full attack story using intuitive investigation tools.

## BENEFITS

- **Reduce time to mitigation** with monitoring, analysis, playbooks, and response tools built for automotive
- **Mature product** that's scalable, resilient, and enables flexible deployment
- **Secure fleets on the road and in the future** with a product already in production
- **Comprehensive detection engines** for uncovering existing and potential attacks
- **Gain immediate value** with deterministic insights unlike behavioral analytics

### THREAT HUNTING

Discover threats targeting your connected vehicles using AI/ML, rule-based, and automotive detection engines

### INCIDENT MANAGEMENT

Handle detected threats with collaborative tools and the support of Argus' playbooks and L3 response services

### INVESTIGATION TOOL

Identify key vulnerabilities, understand your security posture, and analyze the root cause of attacks with rich data and predefined reports

## WE ARE ARGUS CYBER SECURITY

A global leader in automotive cyber security, Argus provides proven in-vehicle solutions, professional services, and an automotive security operation center (ASOC). Currently in production, Argus products and services help protect against cyber attacks targeting vehicle components, networks, or post-production fleets. Customers include car manufacturers, their suppliers, and fleet managers. Argus is headquartered in Tel-Aviv, Israel and is an independent company of Elektrobit. Visit [argus-sec.com](https://argus-sec.com) to learn more.
